- For the most effective treatment, we recommend putting all infected fish in a separate quarantine tank and dosing according to the label. Also, do a 50% water exchange in the tank before each treatment.

- **PimaFix: Fungal Infections**
 - Treats cotton-like fungal infections, and both internal and external bacterial infections. PimaFix harnesses the unique antifungal and antibacterial properties of the West Indian Bay Tree (*Pimenta racemosa*) for a safe and natural remedy; prevents the development of resistant strains of disease-causing organisms. Will not discolor water, affect biological filter, or pH during treatment. Will not harm aquatic plants.

- **MelaFix: Bacterial Infections**
 - Contains the natural botanical extract from the Tea Tree (*Melaleuca*), an excellent alternative to resistant strains of bacteria that are unaffected by traditional medications. Treats bacterial infections such as red ulcers, fin and tail rot, cloudy eyes, mouth fungus, and others in as little as 4 days. Also heals open wounds, ulcers, and damaged fins. Doesn't affect pH; safe for invertebrate
 - PimaFix can safely be used with MelaFix to provide the added benefit of quick tissue regeneration and wound healing. PimaFix has unique antifungal and antibacterial properties that prevent the development of resistant strains of disease-causing organisms. MelaFix is an all-natural botanical solution that remedies bacterial infections in as little as 4 days. Also heals open wounds, ulcers, and damaged fins.

- **Stress Coat:** Calming agent/Healing Agent/Chlorine Remover
 - Water conditioner that contains the healing power of Aloe Vera to help reduce susceptibility to disease and infection, help heal torn fins and skin wounds and reduce electrolyte loss. The water conditioner forms a synthetic slime coating to replace the natural secretion that is interrupted by handling, shipping, fish fighting or other stressors. The conditioner also neutralizes heavy metals and removes chlorine and chloramines found in tap water to help you create a nurturing, healing and safe aquarium environment for your fish.
- **Ammo Lock:** Safely removes ammonia
 - Promotes healthy gill function and eliminates fish stress caused by ammonia. Also removes chlorines.
- **Ich-x:** White nodules that look like white grains of salt or sugar of up to 1 mm appear on the body, fins and gills
 - Utilizes the most widely respected formulation for the treatment of ich, with a less toxic form of malachite green.
 - Treats: Ich, Cryptocaryoniasis, Trichodiniasis, Velvet (Gold Dust), Saprolegniasis.
- **Prazi-Pro:** External Parasites
 - Controls disease conditions caused by flukes, tapeworm, flatworm, and internal parasites.
- **Tetra Pond Fish Treatment:** Parasite/Bacteria/Fungi
 - Treats Koi and Goldfish infected by protozoan parasites, including Ichthyophthirius multifiliis (Ick or white spot), Costia, Chilodonella, and Trichondina. Treats and prevents pond fish diseases. Controls external parasites, bacteria, and fungi that can cause infection.
- **De-Clor:** Instantly removes chlorines found in city water. Chlorine is highly toxic to fish.
- **Pond Salt:** Helps to control parasites and bacteria that may be found in water.
 - For fish only – 2½ cups/100 gal. = .2 ppm
 - For plants – 1¼ cups/100 gal. = .1 ppm
